FITCH DOWNGRADES 3 TDA CAM TRANSACTIONS; AFFIRMS 6 OTHERS

Fitch Ratings-London/Madrid-02 July 2010: Fitch Ratings has today downgraded three TDA CAM transactions and affirmed six others. The rating actions follow Fitch's assessment of the current credit enhancement levels against the agency's revised criteria assumptions for Spanish RMBS transactions. The rating actions also take into account the performance of the deals to-date, as well as Fitch's expectations on their future performance. A full rating breakdown is provided at the end of this comment.

With the level of gross cumulative defaults in the less seasoned transactions (TDA CAM 5 to 9) exceeding the levels seen in the earlier deals, Fitch has concerns over the performance of the underlying assets. Due to the high volume of defaults in TDA CAM 7 and TDA CAM 9, the trigger for the pro-rata amortisation of the class A notes has been breached, and as it is linked to the gross cumulative defaults, it will not be cured. As a result the amortisation of the notes will continue to be in order of seniority. Fitch views the exposure of the less seasoned pools to non-Spanish debtors or broker-originated loans, which have been more severely hit by the current economic downturn, to be among the drivers for the performance deterioration observed in these more recent TDA CAM deals.

All nine transactions include a provisioning mechanism, whereby loans in arrears by more than 12 months are provisioned for the full outstanding amount. Due to the high volume of defaults being recognised each period and limited recoveries received, the later transactions in the series (TDA CAM 5 to 9) have all seen significant reserve fund draws. As a result, the credit support currently available to the junior tranches of these deals has declined, despite the sequential amortisation of the notes.

TDA CAM 6, 7, 8 and 9 have seen a significant portion of recoveries come through in the past few months, which has led to marginal replenishments of the reserve fund draws to date. However, these transactions remain exposed to the lagging effect of unemployment in Spain, as well as the inevitable increase in interest rates. Both factors are expected to put additional stress on the transactions' ability to generate sufficient revenue necessary to cover future defaults.

The more seasoned transactions issued 2006, TDA CAM 1 to 4, have to date generated sufficient revenue necessary to provision for defaults. The underlying assets in these transactions have also benefited from significant deleveraging, and report weighted average loan-to-value ratios in the range of 46.1% to 50.9%. With Fitch's expectations of house price declines 30% peak-to-trough, the agency believes that the level of losses from the sale of properties in the underlying pools will remain manageable. In addition, the transactions have a fully sequential amortisation structure in place, which has led to a significant increase in the credit enhancement levels of the rated tranches.

Similar to TDA CAM 5 to 9, the level of excess spread that TDA CAM 1 to 4 will generate, is highly dependent on the level of recoveries the issuer is able to generate from defaulted loans. However, the agency believes that excess spread generation in these deals, with the exception of TDA CAM 4, will be more than sufficient to cover the provisions on newly recognised defaults. The Negative Outlook on class B of TDA CAM 4 is a reflection of Fitch's expectation of reserve fund draws.

The latest investor reports for the TDA CAM series show stabilisation in the volume of loans in arrears by more than three months. The portion of such loans makes up between 0.3% (TDA CAM 1) and 2.6% (TDA CAM 9) of the outstanding portfolios, compared to 0.5% (TDA CAM 1) to 5.4% (TDA CAM 9) 12 months ago. Fitch believes that the stabilisation in arrears in the higher buckets has predominantly been driven by loans rolling into default, although recoveries could also be benefiting from the originator's recently strengthened servicing and recovery procedures.

Nevertheless, the agency has concerns over the sustainability of the improved performance, which is reflected in the downgrades taken on TDA CAM 5, 6 and 7.
