#### RELEVANT INFORMATION

it is hereby disclosed that Airtificial Intelligence Structures S.A. ("Airtificial" hereafter) has signed two new contracts with Airbus Defence and Space.

Under the first contract, Airtificial will manufacture parts in composite material for the fairing of the A330MRTT pole (refueling tanker in flight), parts used for refueling operations in flight. This contract will be the second of Airtificial related to an essential element of the refueling in flight since, at present, it exclusively manufactures the stick that directs the refueling system, which is a criticality piece Dal A, the maximum possible.

The second contract, of greater quantity, consists of the manufacture of various parts for the C295 (tactical transport aircraft).

These contracts increase the existing relationship between Airbus and Airtificial. The parts to be manufactured were supplied by another manufacturer and their reassignment in Airtificial supposes the ratification of the industrial and financial confidence of Airbus in our company. The amount of the contracts can not be disclosed for reasons of confidentiality.

Both contracts are of an indefinite nature, so Airtificial will manufacture the parts throughout the life of the aircraft.

Truly yours,

Borja Martínez-Laredo  
Chief Executive Officer
