Correction: Fitch Places BBVA RMBS on RWN Ratings Endorsement Policy

19 May 2014 9:11 AM (EDT)

Fitch Ratings-London-19 May 2014: This commentary replaces the one published on 16 May 2014 and amends the balance of un-provisioned loans in BBVA RMBS 2 to EUR52.9m.

Fitch Ratings has placed all 13 tranches of three BBVA RMBS on Rating Watch Negative (RWN).

The loans in the portfolios are originated and serviced by Banco Bilbao Vizcaya Argentaria (BBVA; BBB+/Stable/F2).

KEY RATING DRIVERS**Increasing Volume of Un-Provisioned Loans**

Under the transactions' provisioning mechanism defaulted loans (defined as balance in arrears by more than 12 months) are written off. The transactions' swaps produce a guaranteed margin of 35bp on a notional that is the outstanding balance of the portfolio net of loans in arrears by more than 90 days. Proceeds available following the payment of senior fees and interest are used to provision for defaulted loans

Excess spread has not been sufficient to provision for the defaulted loans and therefore the reserve funds have been fully utilised. This has led to a build-up in the volume of un-provisioned loans, which now stands at EUR11.4m, EUR52.9m and EUR198.2m for BBVA RMBS 1, 2 and 3 respectively. These balances have been on an upward trend since the reserve funds were fully utilised in November 2012 (BBVA RMBS 1), August 2010 (BBVA RMBS 2) and July 2009 (BBVA RMBS 3).

Fitch has been in touch with the management company (Europea de Titulizacion, EdT) to gain a better understanding of the causes behind the growth of defaults that is putting pressure on credit enhancement. EdT has provided the additional information requested by Fitch and pending completion of its analysis, Fitch has placed the notes on RWN. The agency expects to resolve the RWN within a month and the outcome could include a downgrade of the note tranches or affirmation of existing ratings.

Loans in 3-Month Arrears Stable

Loans in arrears by more than three months remain low relative to Fitch's benchmark indices at between 71bp (BBVA RMBS 1) and 127bp (BBVA RMBS 3). The volume of loans entering early stage arrears has remained stable over the last year. Loans in arrears between one and two months range between 1.4% (BBVA RMBS 1) and 2.2% (BBVA RMBS 3) of the current outstanding balance compared with 1.4% and 2.8% a year earlier, suggesting that period defaults are set to continue at the pace seen in the past.

High Dependency on Recoveries

All three transactions remain highly dependent on recoveries from defaulted loans. The market value decline indicated by the sale of properties taken into possession from these transactions has been steeper than the market average. Fitch's analysis suggests that sales in 2013 achieved only 27.5% of the original property values.

RATING SENSITIVITIES

The transactions remain highly susceptible to recoveries on properties sold. Evidence of property sales at values that are below Fitch's assumptions could indicate reduced prospects for future recoveries on defaulted loans and therefore put pressure on the ratings of the notes.

Fitch is analysing the information received to gain greater insight into the performance of these transactions. If this suggests that future defaults will be greater than the volumes assumed in its analysis, the agency will assess the effect they are expected to have on the levels of available credit enhancement. Downgrades would result if the credit enhancement is not expected to be sufficient to withstand the corresponding rating scenarios.

Fitch has placed the following ratings on RWN:
