4. Adjustments to the carrying value of the BNP Paribas Group's securities and derivatives portfolios and the BNP Paribas Group's own debt could have an adverse effect on its net income and shareholders' equity.

What are the key risks that are specific to the securities?

Most material risk factors specific to the securities

There are also risks associated with the Warrants, including:

1. Risk relating to the structure of the Warrants:

Leverage Products: Investors may be exposed to a partial or total loss of their investment. The return on the Securities depends on the performance of the Underlying Reference(s). Additionally, the return may depend on other market factors such as interest rates, the implied volatility of the Underlying Reference(s) and the time remaining until exercise (in case of European Style Warrants). The effect of leverage on the Securities may be either positive or negative.

2. Risk relating to the Underlying and its Disruption and Adjustments:

Depending on the terms of the Securities, the amount due on redemption will be determined by reference to the value of the Commodity. If the Commodity does not perform as expected, this will have a material adverse impact on the amounts that Holders will receive in respect of the Securities and may also negatively affect the value of the Securities. The value of the Securities will be dependent on the performance of a future or option contract. If such underlying futures or options contract does not perform as expected, an investor in such types of Securities may receive a lower return (and could receive a significantly lower return) than anticipated: exposure to one or more commodity and/or commodity index, similar market risks to a direct commodity investment, market disruption and adjustment events which may have an adverse effect on the value or liquidity of the Securities, delays to the determination of the final level of a commodity index resulting in delays to the payment of the Cash Settlement Amount and that the Issuer will not provide post-issuance information in relation to the Underlying Reference.

3. Risks related to the trading markets of the Warrants:

Factors affecting the value and trading price of Securities: The trading price of the Securities may be affected by a number of factors including, but not limited to, the relevant price, value or level of the Underlying Reference(s), the time remaining until the scheduled redemption date of the Securities, the actual or implied volatility associated with the Underlying Reference(s) and the correlation risk of the relevant Underlying Reference(s). The possibility that the value and trading price of the Securities will fluctuate (either positively or negatively) depends on a number of factors, which investors should consider carefully before purchasing or selling Securities.

4. Legal risk:

Meeting of Holders: The terms of the Securities will contain provisions for calling meetings of holders of such Securities to consider matters affecting their interests generally. These provisions permit defined majorities to bind all holders, including holders who did not attend and vote at the relevant meeting and holders who voted in a manner contrary to the majority.

¿Cuáles son los principales riesgos específicos de los valores?

Factores de riesgo más esenciales específicos de los valores

También hay riesgos asociados a los Valores, incluidos :

1. Riesgo relacionado con la estructura de los Valores :

Productos de Apalancamiento : Los inversores pueden estar expuestos a una pérdida parcial o total de su inversión. La rentabilidad de los Valores depende de la rentabilidad del/de los Subyacente(s) de Referencia y de si se aplican características de. Además, la rentabilidad puede depender de otros factores de mercado tales como tipos de interés, la volatilidad implícita del(de los) Subyacente(s) de Referencia y el tiempo restante hasta el ejercicio (en el caso de Warrants de estilo europeo). El efecto de apalancamiento sobre los Valores puede ser tanto positivo como negativo.

2. Riesgo relativo al Subyacente y a su Interrupción y Ajustes :

Dependiendo de los términos de los Valores, el importe adeudado en la fecha de amortización se determinará por referencia al valor de la Materia prima. Si la Materia prima no obtiene el rendimiento esperado, los importes que los Titulares recibirán con respecto a los Valores, y posiblemente también el valor de los Valores, se verán afectados negativamente de forma significativa. El valor de los Valores dependerá del rendimiento de un contrato de futuros u opciones. Si dicho contrato de futuros u opciones subyacente no obtiene el rendimiento esperado, un inversor en este tipo de Valores puede recibir un rendimiento más bajo (y podría recibir un rendimiento significativamente más bajo) de lo previsto.

3. Riesgos relativos a los mercados de negociación de los Valores :

Factores que afectan al valor y al precio de cotización de los Valores : El precio de cotización de los Valores puede verse afectado por una serie de factores que incluyen, entre otros, el precio, el valor o el nivel pertinentes del Subyacente de referencia, el tiempo restante hasta la fecha de amortización prevista de los Valores, la volatilidad real o implícita asociada con los Subyacentes de referencia y el riesgo de correlación de los Subyacentes de referencia pertinentes. La posibilidad de que

el valor y el precio de cotización de los Valores fluctúan (ya sea al alza o a la baja) depende de una serie de factores que los inversores deben considerar cuidadosamente antes de comprar o vender los Valores.

4. Riesgos legales :

Juntas: Las condiciones de los Valores contendrán disposiciones para convocar juntas de titulares de dichos Valores para considerar cuestiones que afecten a sus derechos de forma general. Estas disposiciones permiten que las mayorías definidas vinculen a todos los titulares, incluidos los titulares que no asistan y voten en la junta pertinente y los titulares que voten de forma contraria a la mayoría.
