You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

It is a bond for which the Client pays a purchase amount and the Issuer assumes, on the Maturity Date, the obligation to pay part of the Nominal Amount of the bond or all the Nominal Amount of the bond ("Nominal Amount"), depending on the evolution of one or several Underlying Assets, with no commitment of paying back the whole Nominal Amount. Furthermore, the product grants to its holders the right to receive a Payout (as defined below), provided that certain conditions related to the evolution of one or more Underlying Assets are met.

Objectives

The Payout and the payment of the Nominal Amount depend on the fulfilment of certain conditions, related to the performance of the Underlying Asset.

- Payout:

For 70% of the Nominal Amount:

On the 26/10/2021 the Issuer pays a Payout for each bond equal to $70\% \times \text{Nominal Amount} \times \text{Coupon 1}$

For 30% of the Nominal Amount:

As long as the Product has not been redeemed previously:

On each Reference Date or Final Reference Date, the Issuer pays a Payout for each bond equal to $30\% \times \text{Nominal Amount} \times \text{Coupon 2}$

Additionally, if on a Reference Date or Final Reference Date the Value of the Underlying Asset is higher than or equal to the Trigger, the Issuer pays a Payout for each bond equal to $30\% \times \text{Nominal Amount} \times \text{Coupon 3}$

- Payment of the Nominal Amount:

For 70% of the Nominal Amount:

On the 26/10/2021 the Issuer pays for each bond $70\% \times \text{Nominal Amount}$.

For 30% of the Nominal Amount:

- a) If on a Reference Date or in the Final Reference Date the Value of the Underlying Asset is higher than or equal to the Trigger, the Product redeems in that date and the Issuer pays on the Maturity Date for each bond 30% x Nominal Amount.
- b) If on the Final Reference Date the Value of the Underlying Asset is lower than the Trigger:
 - (i) If the Barrier Activation Condition has not been met, the Issuer pays back on the Maturity Date for each bond 30% x Nominal Amount.
 - (ii) If the Barrier Activation Condition has been met, the Issuer pays on the Maturity Date for each bond part of the Nominal Amount resulting from the following formula:

$$30\% \times \text{Nominal Amount} \times \text{Value of the Underlying Asset} / \text{Strike of the Underlying Asset}$$

In this situation, it may occur that the Nominal Amount will not be returned.

What are the risks and what could I get in return?

Summary Risk Indicator

Summary Risk Indicator

The risk indicator assumes you keep the product for 5 years; until the date 27 October 2025. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may have to pay a significant extra cost to cash in early.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is 3 a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are very unlikely to impact our capacity to pay you.

You are entitled to recover at least 70% of your capital. Any amount over this, and any additional return, will depend on future market performance and is uncertain.

However, this protection against future market performance will not apply if you — Where early exit conditions apply cash-in before 26/10/2021.

If we are not able to pay you what is owed, you could lose your entire investment.

This table shows the money you could get back over the next 5 years and 1 day, under different scenarios, assuming that you invest EUR 10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product.

The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. This product cannot be easily cashed in. This means it is difficult to estimate how much you would get back if you cash in before the end of the recommended holding period. You will either be unable to cash in early or you will have to pay high costs or make a large loss if you do so. The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor. The figures do not take into account your personal tax situation, which may also affect how much you get back. Payments made to a client during the life of a product requires BBVA to make certain assumptions. This is for the purpose of undertaking scenario analysis and the calculation of product profitability as shown in the

table. BBVA has chosen to capitalize on these payments, assuming a reinvestment until maturity at a risk-free rate of interest.

What happens if the Issuer is unable to pay out?

Banco Bilbao Vizcaya Argentaria, S.A. guarantees the payment obligations that the Issuer assumes in the Product, in its same terms. The Product is not covered by the Credit Institutions Deposit Guarantee Scheme or any other guarantee scheme. In the event that BBVA as guarantor could not pay, the Client would face a financial loss.

In the event of the resolution of the Guarantor of such financial instrument (applicable process when the Guarantor is insolvent or it is expected that it will become insolvent in the near future and due to public interest and financial stability it is necessary to avoid its insolvency), such product could be converted into shares or its Nominal Amount and, as a result, the Client could make losses in their investment.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest 10,000 EUR. The figures are estimates and may change in the future.

Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.
