TELVENT

Our Solutions

We help our customers...

Manage more than 60% of the total hydrocarbon movements in North America and Latin America pipelines.

Transport and distribute more than 140.000 GWh, providing electricity to over 80 million people.

Provide traffic information via web and phone to 56 million of people per month.

Ensure the safe and efficient departure and arrival of more than 700 million passengers per year in over 150 airports in all the world.

Manage the transportation of more than 2,500 million passengers per year on train and metro networks.

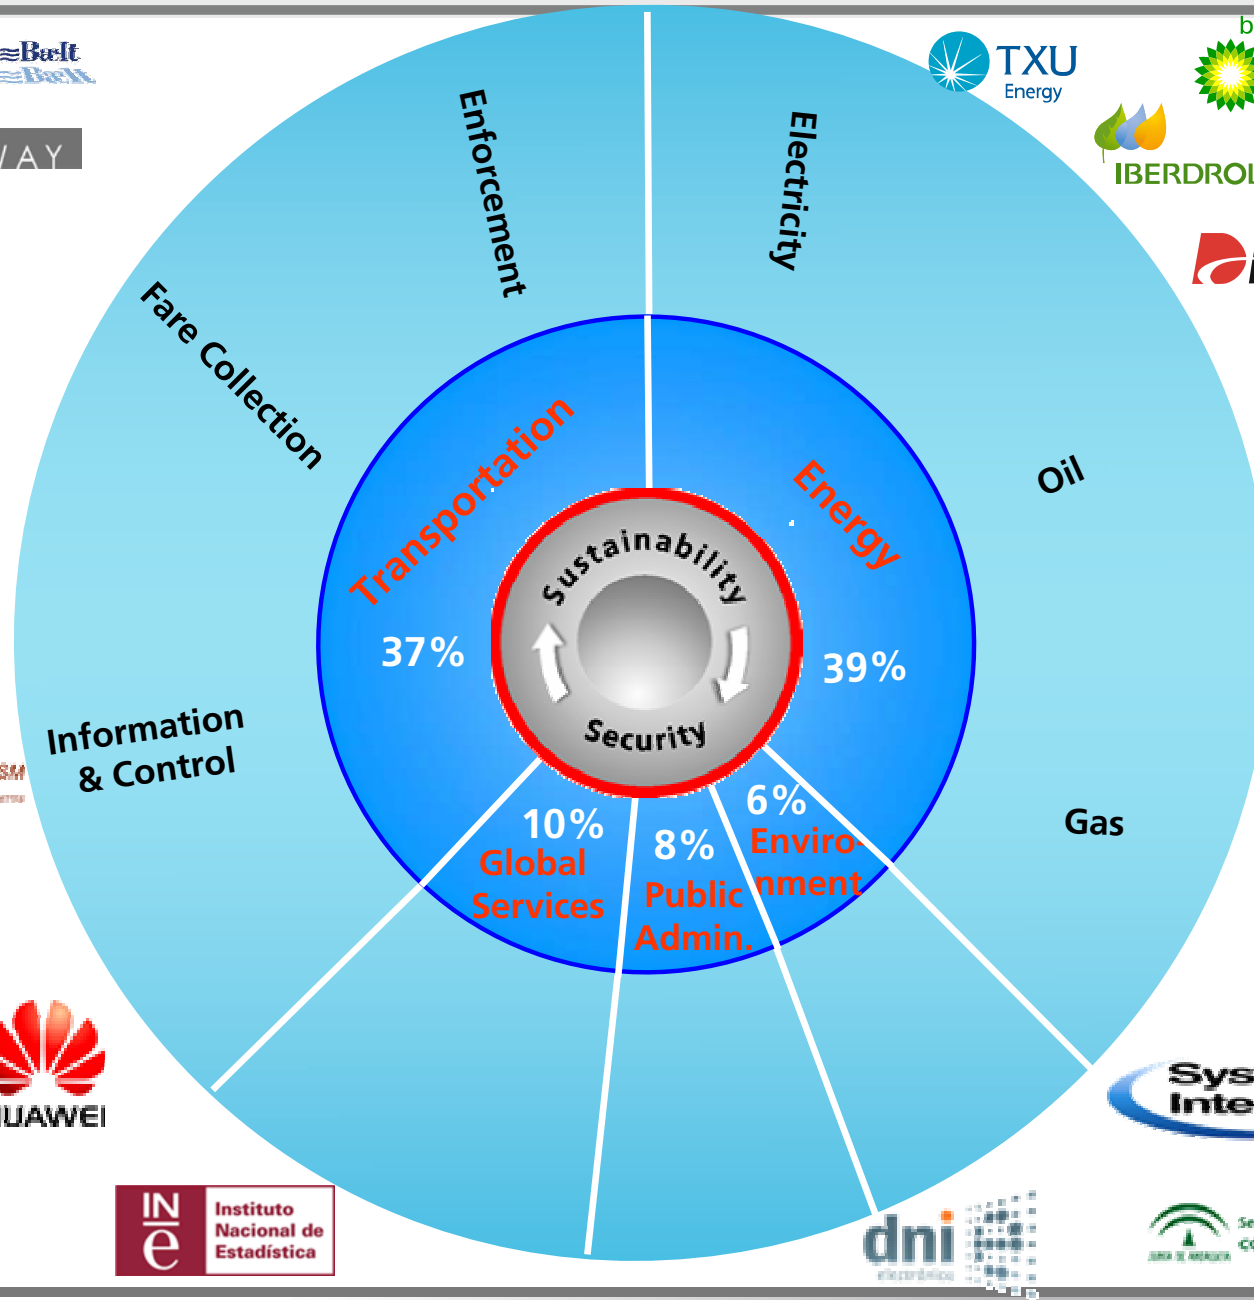

Control the entrance of more that 50 million people a year through the Spanish frontiers.

Manage water distribution to over 30 million of people in Europe, North America, Latin America and Middle East.

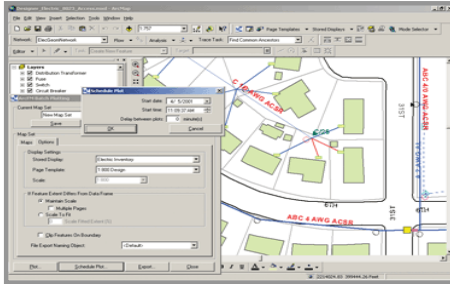

Manage IT infrastructure for more of 350 companies from our Data Centers Network.

IT for a
Sustainable
and **Secure**
World

- We help our Energy customers by ...

Increasing energy efficiency at the industrial and domestic level through **real time full integration** of every piece of intelligent information in the electric utility

Reducing the energy consumption of **pumping system in liquid pipelines**, so as the speed and accuracy for the automatic leak detection and location

Optimizing the efficiency in the production of **renewable energies** and bio fuels, so that they can become a stronger and real alternative

- We help our Transportation customers by ...

Use of both intelligent electronics and software to optimize the **traffic flow**, and improve automatic special vehicles tracking

Elimination of pay toll fences by the implementation of **electronic open toll** platforms

A secure and efficient management of **public transport** systems in a way they are used frequently by more people

- We help our Environment customers by ...

Reduction of **water leakage** in the distribution and transport network, which can represent up to 60% of the total volume in many cases

Monitoring in real time and continuously the **emissions and absorption** of Greenhouse Effect Gases, determines the effectiveness of the plan of action

Improvement of the accuracy and anticipation of severe **climate effects** to reduce human and material costs

- We help our Public Administration customers by ...

Facilitating the gradual transformation of traditional procedures into a comprehensive **digital government management** model that increases security and sustainability

Implementation of border control systems that contribute towards a **more secure world** by palliating terrorist threats and controlling migratory flows

Offering our **Healthcare** clients new functionality in clinical, administrative and financial areas, which allows them to reduce consumption of material and enhance security in storage of electronic data

- We help our Global Services customers by ...

Providing **current and future viability** for their businesses and allowing them to adapt to today's rapid technological growth and allocate resource to their particular business orientation

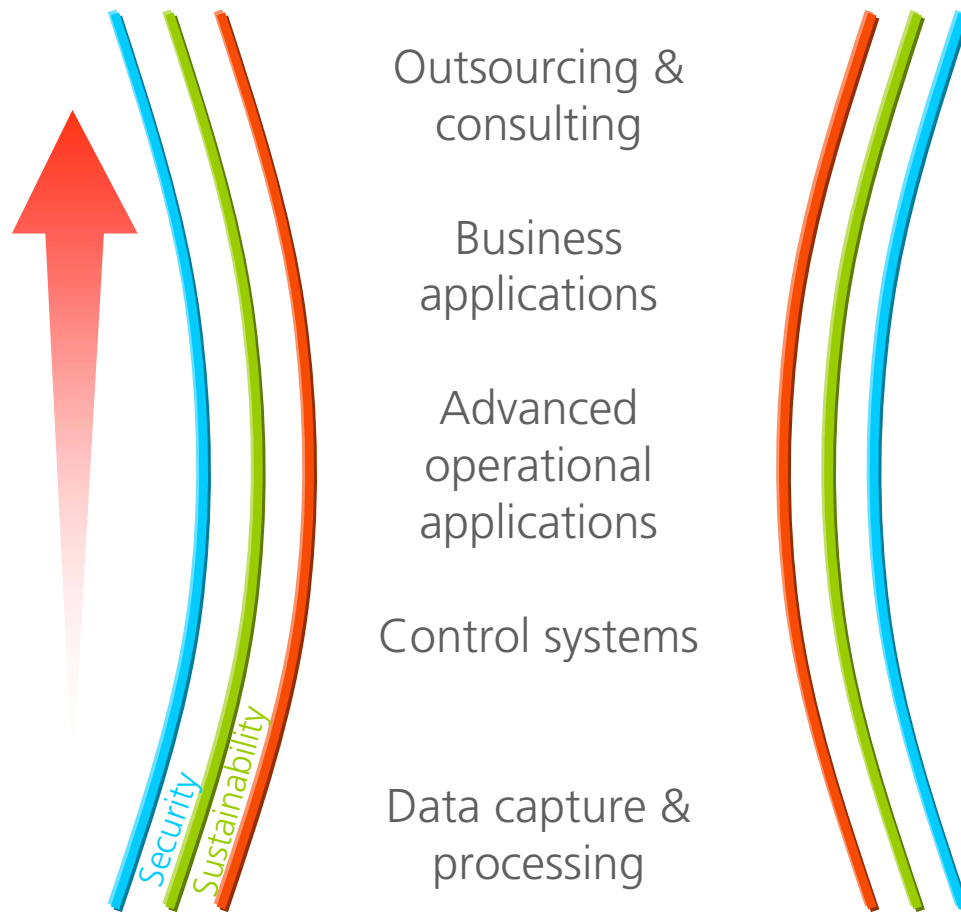

Increasing the **security of the information systems** of our customers through the outsourcing and management of critical technological infrastructures

Reducing thousands of tons of CO₂ each year, thanks to the systems concentration and optimization conducted in our network of **Green Data Centers** in Spain and Portugal.

Telvent's strategy is to move **"Up the Hour Glass"...**

Telvent's strategy
"Up The Hour Glass"

- Customers' IT systems
- Link business intelligence with IT systems
- Convert operational information into business intelligence
- Transform data into operational information
- Compile field data
