

CNMV ANNOUNCES TEN TECHNICAL STAFF POSTS

27 July 2017

- Specialists in solvency, risk measurement and quantitative techniques
- Applications can be submitted until 22 September
- The terms are published on CNMV'S website

The National Securities Market Commission (CNMV) has announced ten technical staff posts for specialists in solvency, risk measurement and quantitative techniques.

The call is part of CNMV'S reinforcement in a context marked by the recent assumption of new powers by the agency, the growing dynamism and complexity of the markets and increased competition between financial centres as a result of Brexit.

The terms of the call are available on the [CNMV website](#).

With this announcement CNMV seeks to incorporate 10 experts in the regulations for determining the solvency, organizational and standards of conduct requirements applicable to credit institutions, investment firms or central counterparty clearing houses and, in particular, in risk measurement models and quantitative techniques. The duties to be performed include the preparation of specific validation reports in relation to the internal models, as well as participation in the development and circulation of technical and methodological criteria related to these models. In addition, the new experts will work in the valuation of financial products and companies and use massive data processing tools and statistical analysis, among other duties.

The call, which includes internal promotion posts and vacancies, is accepting candidates with a bachelor's degree, a degree in architecture, or an engineering degree with five years of experience in the duties related to those described in the call. Applications can be submitted until 22 September.
