Building Block Approach (BBA)

General Assessment approach /Default approach

Assesses fulfillment cash flows using a dynamic calculation, updating hypotheses with each calculation, and recognizing expected profit from the contract or CSM, through its allocation to P&L as service is provided throughout the coverage period. It comprises:

1. Fulfillment cash flows, which include:
 - Present value of expected future cash inflows and outflows that arise over the length of the contract
 - An adjustment to reflect the time value of money and other financial risks, like liquidity and exchange rates
 - An explicit adjustment for non-financial risk
2. Contractual Service Margin (CSM), which represents unearned profit from contracts. If CSM is negative, the contract will be considered onerous and balance sheet CSM will be zero, recording loss in P&L at the time of inception of the contract, as established by the standard.

Variable Fee Approach (VFA)

Variation of the default approach (BBA) which is applicable to contracts with significant direct participation features.

Premium Allocation Approach (PAA)

Simplification of BBA and can be optionally used for contracts with coverage of ≤ 1 year, and in some specific cases where the contract duration is >1 year and the assessment is not expected to vary materially from BBA. This approach is similar to current Unearned Premium Provision approach.

Based on technically defined directives, MAPFRE believes that, in general, it will assess insurance and reinsurance contracts as follows:

Insurance contracts	Approach
Life and Non-Life lines with duration of <1 year(*)	PAA
Burial line	BBA
Life contracts with duration >1 year	BBA
Contracts with direct participation (Unit Linked and certain life products with profit-sharing)	VFA
Reinsurance contracts	
Ceded, accepted and retroceded	PAA

*Non-Life contracts with duration greater than one year but with no material difference from BBA expected will also be measured using PAA
