## PharmaMar signs a new licensing and commercialization agreement with Eczacıbaşı for lurbinectedin in Turkey

**Madrid, December 22<sup>nd</sup>, 2021.** – PharmaMar (MSE:PHM) has announced today a new license and commercialization agreement with the Eczacıbaşı Pharmaceuticals Marketing Co. to commercialize the anticancer drug lurbinectedin in Turkey.

Under the terms of the agreement, PharmaMar will receive a non-disclosed upfront payment and will be eligible for additional remunerations, including regulatory and sales milestone payments. PharmaMar will retain production rights and will sell the product to Eczacıbaşı for its clinical and commercial use.

Eczacıbaşı will pursue the marketing authorization in Turkey and will have the right to commercialize the product on an exclusive basis, upon approval. In addition, a Named Patient Basis program is planned to be launched in Turkey via TEB (Turkish Pharmacy Association) to make lurbinectedin accessible to relapsed Small Cell Lung Cancer (SCLC) patients, who are unable to enter clinical trials and to whom no alternative treatments are available.

**Luis Mora**, General Manager of PharmaMar's Oncology and Virology Business Units, said: *"This is the second agreement we have signed with Eczacıbaşı. We have great confidence in their team and we are confident that, if approved, they will bring lurbinectedin to SCLC patients in Turkey."*

**Basbug Oke**, General Manager of Eczacıbaşı Pharmaceuticals Marketing Co., stated that *"We are passionate about launching innovative medicines in Turkey and PharmaMar is a unique partner given their expertise in research and development. Lung cancer is the leading cause of cancer mortality accounting 37.000 deaths per year in Turkey and we believe lurbinectedin will be an important treatment option for Small Cell Lung Cancer patients. We look forward to working with PharmaMar closely to expeditiously bring lurbinectedin to patients in Turkey."*

Lurbinectedin was granted accelerated approval by FDA (Food and Drug Administration) for the treatment of relapsed metastatic Small Cell Lung Cancer in

2020. In addition, in 2021, lurbinectedin has received marketing approval in the United Arab Emirates, Canada, Australia and Singapore.

#### **Legal warning**

This press release does not constitute an offer to sell or the solicitation of an offer to buy securities, and shall not constitute an offer, solicitation or sale in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of that jurisdiction.

#### **About PharmaMar**

PharmaMar is a biopharmaceutical company focused on the research and development of new oncology treatments, whose mission is to improve the healthcare outcomes of patients afflicted by serious diseases with our innovative medicines. The Company is inspired by the sea, driven by science, and motivated by patients with serious diseases to improve their lives by delivering novel medicines to them. PharmaMar intends to continue to be the world leader in marine medicinal discovery, development and innovation. PharmaMar has developed and now commercializes Yondelis® in Europe by itself, as well as Zepzelca® (lurbinectedin), in the US; and Aplidin® (plitidepsin), in Australia, with different partners. In addition, it has a pipeline of drug candidates and a robust R&D oncology program. PharmaMar has other clinical-stage programs under development for several types of solid cancers: lurbinectedin and PM14. Headquartered in Madrid (Spain), PharmaMar has subsidiaries in Germany, France, Italy, Belgium, Austria, Switzerland and The United States. PharmaMar also wholly owns other companies: GENOMICA, a molecular diagnostics company; and Sylentis, dedicated to researching therapeutic applications of gene silencing (RNAi). #### **About lurbinectedin**

Lurbinectedin (Zepzelca®), also known as PM1183, is an analog of the marine compound ET-736 isolated from the sea squirt *Ecteinacidia turbinata* in which a hydrogen atom has been replaced by a methoxy group. It is a selective inhibitor of the oncogenic transcription programs on which many tumors are particularly dependent. Together with its effect on cancer cells, lurbinectedin inhibits oncogenic transcription in tumor-associated macrophages, downregulating the production of cytokines that are essential for the growth of the tumor. Transcriptional addiction is an acknowledged target in those diseases, many of them lacking other actionable targets.
